OWNER GUIDE

For Dontrise. This is how to run the shop's website and bookings. Everything happens at **yoursite/admin** (the address Visualize gave you). It works on a phone and on a laptop; the pictures below are the laptop view unless they say phone. If something looks wrong, the last section says who to call.

The screens in this guide were taken from the demo before your real team, prices and photos were loaded, so they show sample barbers and clients. Your own team and clients show in their place.

1. SIGN IN

1. Open **yoursite/admin**.
2. Type your email and password and tap **Sign in**.
3. The first time, the site asks you to choose a new password: 12 characters or more, not a word people could guess.

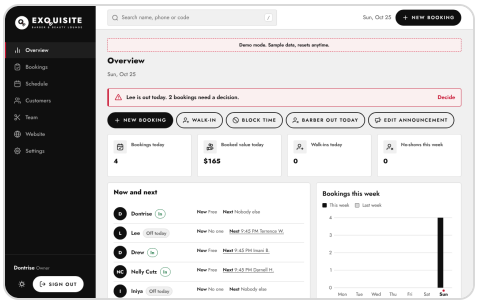

Barbers do not sign in here. They use their own page, **yoursite/team** (see section 11 and the Barber guide).

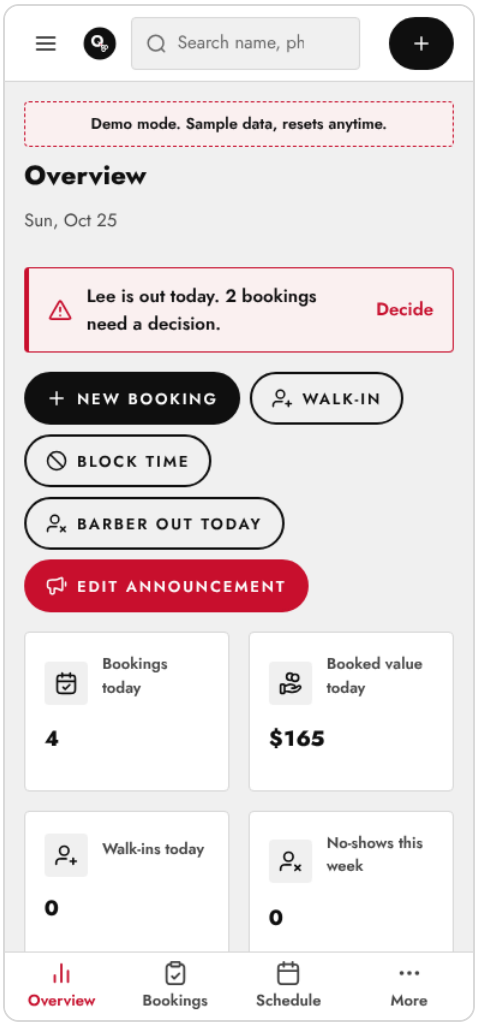

2. READ THE OVERVIEW

The Overview is the first screen. Left: the menu (Overview, Bookings, Schedule, Customers, Team, Website, Settings). Top: search, today's date and **New booking**. Then the quick actions, four tiles with real numbers for today, **Now and next** for every chair, and a chart of bookings this week. On a phone the menu becomes three tabs and **More** at the bottom.

A tile only shows a comparison with last week when there was a last week to compare with. A red strip across the top means something needs your decision (section 9).

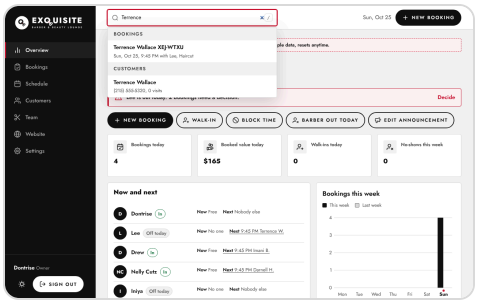

On a phone:

3. FIND A CLIENT OR A BOOKING

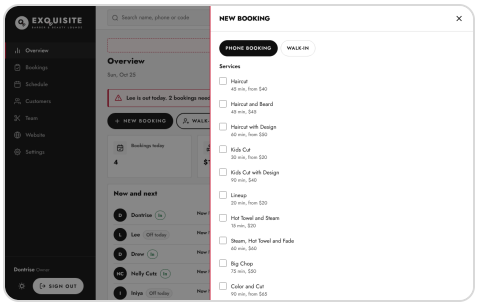

1. Tap the search box at the top, or press **/** on a laptop.
2. Type a name, a phone number or a booking code. Accents and capitals do not matter.
3. Pick a line from the list. A booking opens its panel; a client opens their history.

4. ADD A BOOKING FOR SOMEONE WHO CALLED

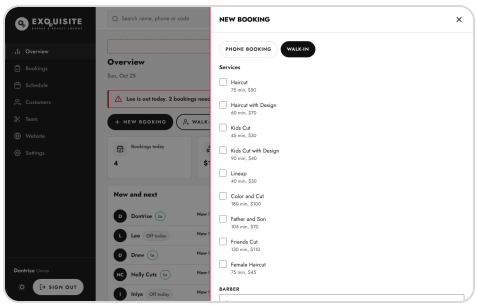

1. Tap **New booking** (top right, or in the quick actions).
2. Tick the services, pick the barber, the day and the time.
3. Type the name and phone. Add an email only if they want a confirmation.
4. Tap the button at the bottom.

A phone booking follows the same rules as the website. If the time is too soon or outside hours, tick **Allow inside the lead time or past the booking window** to take it anyway.

5. ADD A WALK-IN

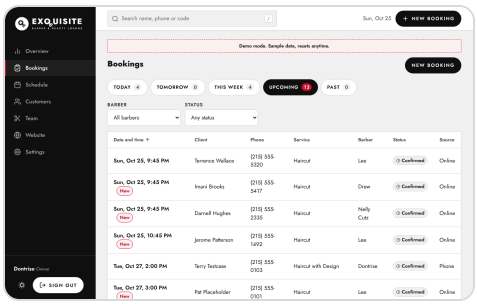

1. Tap **Walk-in** in the quick actions.
2. Tick the services, pick the chair, type the name and phone.
3. Tap **Add walk-in**. It starts now and the chair shows as busy.

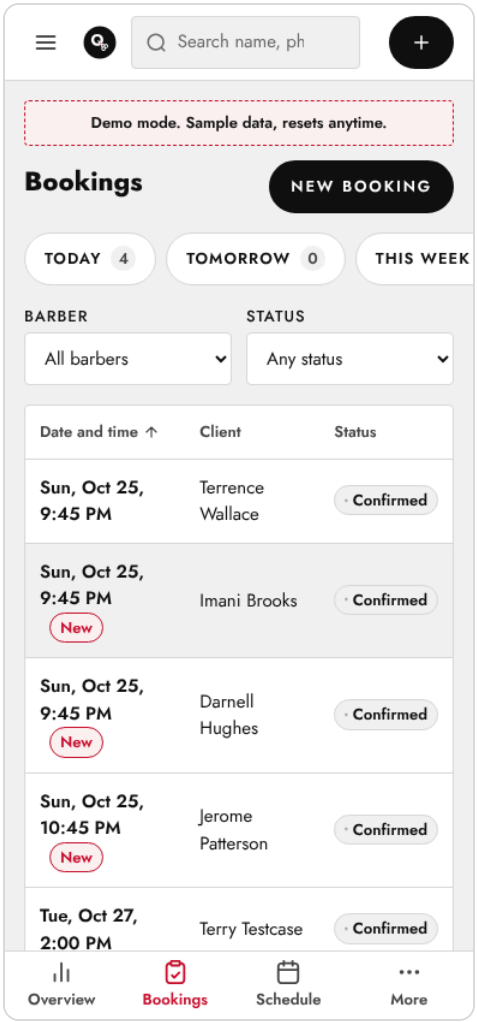

6. WORK THE BOOKINGS TABLE

1. Tap **Bookings** in the menu.
2. Use the quick filters (Today, Tomorrow, This week, Upcoming, Past, each with a count), or pick a barber or a status.
3. Tap a column heading to sort. Tap a row to open the booking.

The filters stay in the address, so you can bookmark a view.

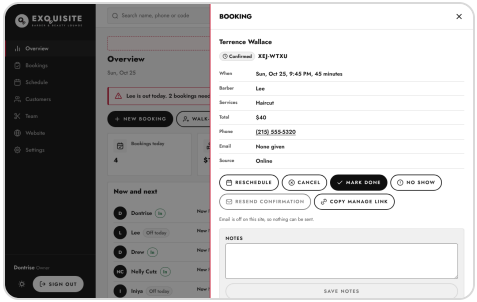

On a phone:

7. CHANGE ONE BOOKING

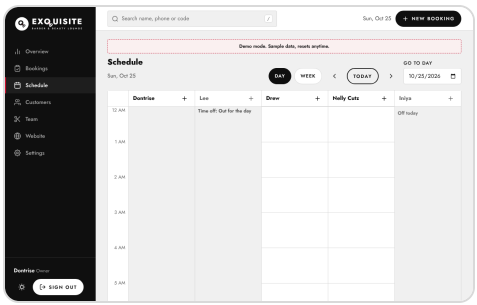

Open a booking from the table, the search or the Overview.

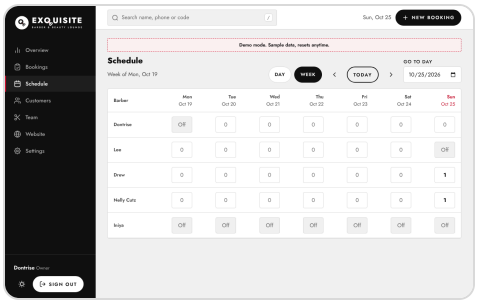

1. **Mark done** or **No show** when the visit is over. A small message offers **Undo** for a few seconds.
2. **Reschedule** moves it to another time, or to another barber. Each barber in the list shows what the booking costs with them. A different barber means their price and time. The customer gets a new link.
3. **Cancel** cancels it. **Cancel and notify** also emails the customer; it is greyed out when there is no email on file.
4. **Resend confirmation** and **Copy manage link** help a customer who lost theirs. Resend is greyed out while email is off, and the panel says why.
5. Type a private note and tap **Save notes**. Clients never see it.

8. READ THE SCHEDULE, AND BLOCK TIME

Schedule shows the day with a column for each chair. Hatched boxes are blocks, grey is time off, and a red line is now. Tap an empty time to start a booking there. Use **Week** for a table of counts; tap a day to open it.

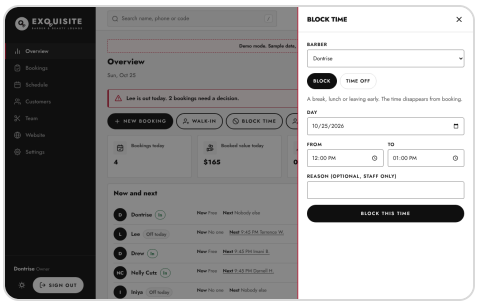

To block time:

1. Tap **Block time** in the quick actions.
2. Pick the barber, then **Block** (a break or lunch) or **Time off**.
3. Pick the day, the start and the end, and an optional reason only staff see.
4. Tap **Block this time**.

If clients are already booked in that time, you are taken to the decision screen instead of the block being saved. Nothing changes until you decide.

9. DECIDE WHEN A BARBER IS OUT

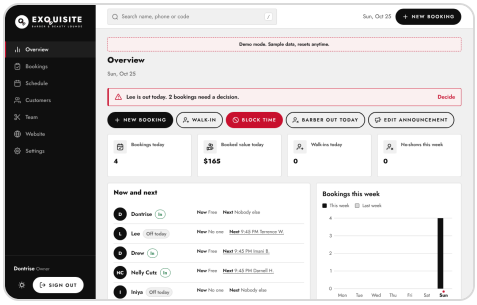

When a barber taps "I am out today", or asks for days off that have bookings, a red strip appears on the Overview. Their clients stay booked until you decide.

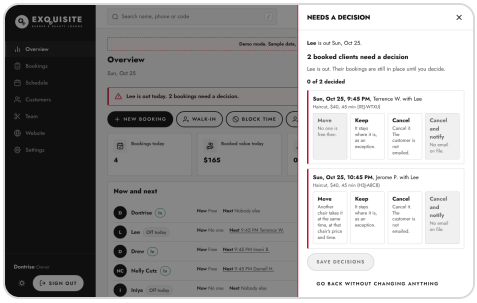

1. Tap **Decide**.
2. For each client, choose one:

- **Move** puts them with another barber at the same time. Only chairs that do the service and are free the whole time are offered, each with what the booking costs with them (for example "Drew, $40, 45 min"). The booking takes that barber's price and time, and the customer gets an email with the new barber and price.
- **Keep** leaves them where they are.
- **Cancel** cancels without emailing.

- **Cancel and notify** cancels and emails the customer.

3. Tap **Save decisions**. You can decide some now and the rest later.

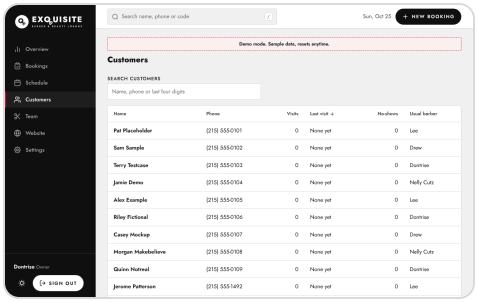

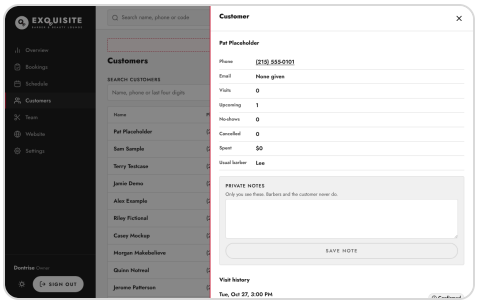

A short recording of this is in `docs/screens/p11/recordings/owner-resolves-alert.webm`.

10. CUSTOMERS AND NOTES

1. Tap **Customers**. People are grouped by phone number.
2. Search, or tap a column heading to sort.
3. Tap a person to see their visits and a private note. Type the note and save.

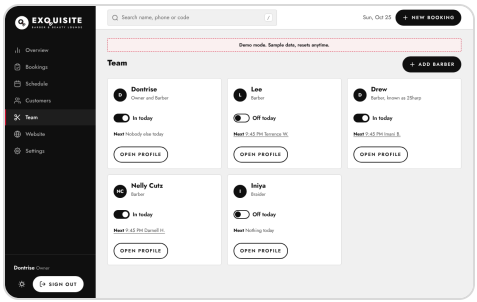

11. TEAM AND BARBER LOGINS

Team has a card per barber. The **In today** and **Off today** switch takes a barber off the booking page for the day. Tap a name for Profile, Services, Prices, Working hours, Time off and Access.

In **Profile**, **Takes online bookings** is for someone who books some other way, like Iniya. Turn it off and their card and page say **Book through Instagram** (or **Walk-ins only** if you have not given an Instagram handle). They are left out of online booking and of "Anyone available". A barber can only be booked for the services ticked under **Services**, so the booking page, your New booking panel and the barber's walk-in form only list those.

To set a barber's own prices (barbers can charge different prices for the same cut):

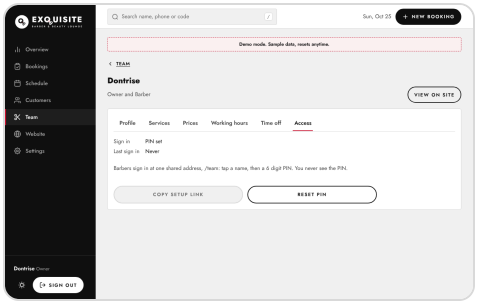

1. Open the barber, tap **Prices**. Every service they do is listed with the shop's price and time under its name.
2. Type a price only where this barber charges a different amount, and minutes only where they take longer or shorter (steps of 5). Leave a box empty to use the shop's price or time.
3. Tap **Save prices**. A message confirms it.

Use shop price empties a row; tap **Save prices** after it. A service missing from the list is not on their menu yet: tick it under **Services** first. The barber's page shows their own exact prices and times, never "From". The Services page, Home and "first available" in booking show the lowest price as **From $x** when barbers charge different amounts. A booking with this barber uses their price and time, in the total, the confirmation email, the ticket and your Bookings. Bookings already made keep the price they were booked at, unless you move one to another barber: then it takes that barber's price and time (sections 7 and 9).

To give a barber their login:

1. Open the barber, tap **Access**.
2. Tap **Copy setup link** and send it to them (text or message). It works once and stops after 72 hours.
3. They open it, choose a 6 digit PIN and type it again. They are signed in.

Reset PIN deletes the PIN, signs the barber out everywhere and ends old links. Use it when a barber forgets or leaves a phone behind. After five wrong PINs a barber is locked for 15 minutes; **Unlock** lets them in sooner. You never see a PIN.

12. WEBSITE AND SETTINGS

Website has six tabs, each with **View on site**:

1. **Hours**: weekly hours, closed days and special days.
2. **Announcement**: the strip across the top of the site.
3. **Services**: add, edit, hide and reorder (arrows or drag). Prices are in dollars and stored as cents. This is the shop's price; a barber who charges differently gets their own price in Team, **Prices** (section 11).
4. **Home photo**: choose a photo; you see how it crops on a phone and a computer.
5. **Gallery**: add several photos, write what is in each (required, it is read aloud to people who cannot see), credit the barber, reorder, edit, remove.
6. **Reviews**: the reviews on Home and the barber pages, and the Google rating.

To credit a gallery photo to a barber:

1. Open **Website**, **Gallery**.
2. Under the photo, pick the barber in **Credit the work to**. It saves right away and a message confirms it. When you add new photos, you can pick the barber before you tap **Upload**.
3. The photo now also shows on that barber's page, and the gallery gets a button per barber so visitors can see one barber's work.

Pick **Nobody in particular** to take the credit off; the photo stays in the gallery. A barber with no credited photos shows up to three shop photos on their page, under **From the shop**.

To show, hide or order the reviews:

1. Open **Website**, **Reviews**.
2. Tap **Hide** next to a review to take it off the site; **Show** puts it back.
3. Tap the up and down arrows to change the order.

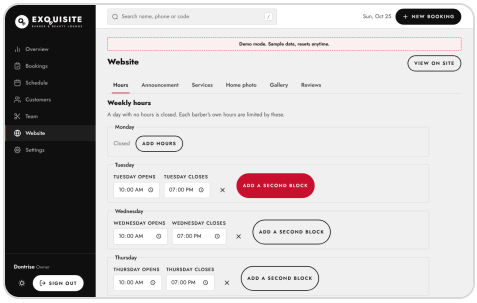

Each tap saves right away and a message confirms it. Home shows the first three that are shown (they carry an **On Home** tag); a barber's page shows up to three about that barber. To take every review off the site, untick **Show reviews on Home and the chair pages** and tap **Save**.

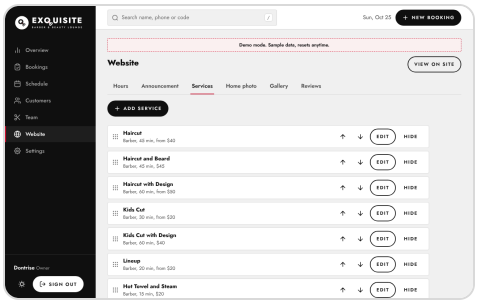

You cannot type or change a review here. Every review on the site is copied word for word from Google or theCut, so it stays real. To add a new one, send it to Visualize.

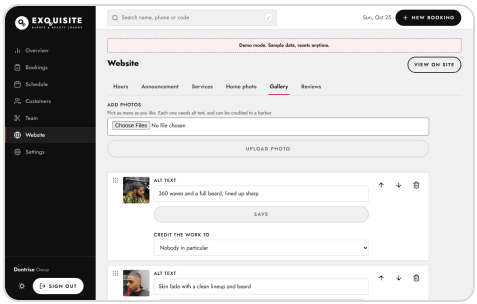

To update the Google rating (Google does not send it to the site, so it changes only when you save it; once a month is enough):

1. Open the shop's Google profile and note the rating and the number of reviews.
2. In **Website**, **Reviews**, type them in **Google rating** (for example 4.7) and **Number of reviews**, and set **Checked on** to today.
3. Read the line under the boxes. It shows what the site will say, for example "4.7 on Google from 15 reviews".
4. Tap **Save**. A message confirms it.

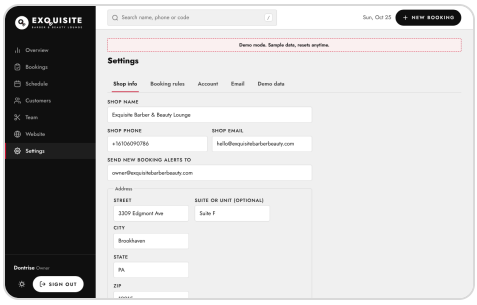

With the number of reviews at 0 the rating line is left off the site; **Read them on Google** and **Leave a review** stay.

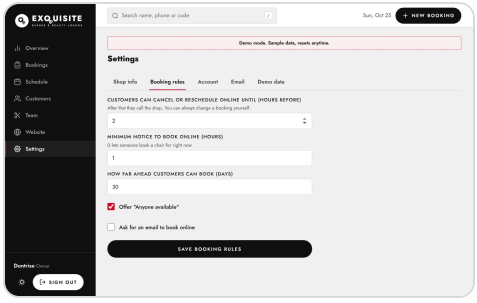

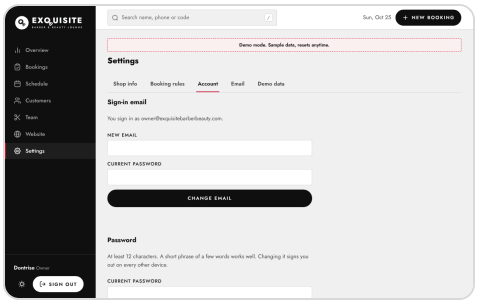

Settings has Shop info (address, phone, email, and the Instagram, TikTok and Facebook links; a link shows in the website footer only when you fill it in), Booking rules, Account (change email or password, light or dark, sign out everywhere) and Email. The shop email stays off the website until you replace the stand-in address with a real one. The cancel time you set in Booking rules is also what the Visit page and the booking confirmation say.

13. CHECK BEFORE THE REAL LAUNCH

The address, phone, hours, team, services, prices, reviews and photos come from the shop's Google profile, your Squire menu, Drew's and Nelly's theCut menus and Instagram. A few things were not public, so they hold a stand-in until you confirm them:

- Lee's services, prices and profile text. He has no public menu, so he has the shop prices and no profile text for now. Change them in Team, Lee (Services, Prices, Profile).
- Your, Lee's and Nelly's working hours (the shop hours for now; Drew's are his theCut hours). Change them in Team, Working hours.
- How soon someone can book (1 hour ahead), how far ahead (30 days) and the cancel time (2 hours). Change them in Settings, Booking rules.
- The shop email and the email that gets new booking alerts (Settings, Shop info), and the email you sign in with (Settings, Account).
- The chair numbers (1 to 5 for now), the 10 minute cleanup gap after each appointment, the reply-to address on emails and the website address. Send these to Visualize.

14. WHO TO CALL WHEN SOMETHING IS WRONG

Tell Visualize first: **contact@visualizeclients.com**. Include what you tapped, what you expected and what happened, and a screenshot if you can. If the site is down, customers see a notice with the shop's phone number, so they can still call.

On the Demo site only: a notice says "This is a demo" the first time someone opens it in a browser session. It never shows on the real site.
